

4. Website Copy Framework

4.1 Website Architecture

The website follows a proven conversion architecture designed for Australian tradespeople. The flow moves the visitor from awareness of their problem (losing money to missed calls), through understanding of the solution (MCTB automation), to confidence in your package (social proof and data), and finally to action (booking a call). Every section is purpose-built to address a specific objection or hesitation that plumbers commonly have when considering a technology service.

#	Section	Purpose	Key CTA
1	Hero	Hook attention with big stat	Book Free Call
2	The Problem	Make the pain real and quantified	Scroll
3	The Solution	Introduce MCTB simply	See How It Works
4	What's Included	Detail package features	Get Started
5	Social Proof	Build trust with results	Join Them
6	FAQ	Handle objections	—
7	Final CTA	Close with urgency	Book Now

4.2 Section 1: Hero

The hero section must stop the scroll immediately. Australian tradies scroll fast — you have less than 3 seconds to capture their attention. The hero headline leads with the most impactful number (\$700/week) because dollar figures create instant emotional resonance. The subheadline provides context without requiring the visitor to think. The CTA button uses 'Book Your Free Call' rather than 'Sign Up' or 'Learn More' because tradies respond better to personal conversations than to sign-up forms.

HERO SECTION — READY-TO-USE COPY

Stop Losing \$700/Week to Missed Calls

The automated text-back system that turns your missed calls into booked jobs — in under 15 seconds.

[\[Book Your Free Call\]](#)

No contracts. No setup fees. See results in 48 hours.

Design notes: Use a dark background (navy or charcoal) with white text for maximum contrast. Include a subtle animation showing a phone ringing then an auto-text appearing. Place a trust bar beneath the hero: 'Trusted by 47+ Australian Plumbing Businesses' and a Google rating badge. The mobile experience is critical — 68% of tradies will visit from their phone during a break between jobs.

4.3 Section 2: The Problem

This section amplifies the pain before introducing the solution — a classic 'problem-agitate' technique. The goal is to make the plumber feel the financial weight of every missed call, transforming an abstract annoyance into a concrete, quantified loss. The three stat cards below are designed to be displayed as prominent visual blocks, each with a large number and a count-up animation effect.

THE PROBLEM — READY-TO-USE COPY

Every Missed Call Is a \$320 Job Walking Out the Door

62% of missed callers never call back

\$36,400 lost to missed calls every year

4.3 customers lost PER DAY to competitors who answer

You're under a house, up a ladder, or driving between jobs. Your phone rings — and by the time you see it, they've already called the next plumber on Google. That's not just annoying. That's \$700 a week walking straight to your competition.

4.4 Section 3: The Solution

The solution section must be dead simple. Plumbers are not tech people — they do not care about API integrations or webhook configurations. They care about one thing: when a call is missed, a text is sent, and a job is booked. The three-step framework mirrors how tradies think (problem, action, result) and avoids any technical jargon.

THE SOLUTION — READY-TO-USE COPY

Missed Call Text-Back: Never Lose a Lead Again

Step 1: A customer calls. You're on a job and can't answer.

Step 2: Within 15 seconds, they get an automatic text: "Hi, this is [Your Business]. Sorry we missed your call! Do you need a plumber? Reply YES and we'll call you right back."

Step 3: They reply. You call back between jobs. Job booked.

No apps to install. No new phone number. No extra staff. It works with your existing business number and runs 24/7 on autopilot.

4.5 Section 4: What's Included

This section provides the detailed breakdown of the \$497/month package. Each feature is presented with a benefit-first description (what it does for the plumber) rather than a feature-first description (what the technology does). This distinction is critical — trades buy outcomes, not tools. The pricing is presented as a single, simple number with no hidden fees and no contracts.

WHAT'S INCLUDED — READY-TO-USE COPY

The Plumber's Lifeline Package — Everything you need to stop losing jobs for just \$497/month

1. **Missed Call Text-Back** — Auto-text within 15 seconds of any missed call. Converts 85% of missed callers into conversations. Recovers an average of \$14,560 per year in previously lost revenue.
2. **Google Review Automation** — Automatically requests a Google review after every completed job. Builds your online reputation on autopilot. Businesses with 4.5+ stars get 35% more clicks from Google searches.
3. **Basic CRM Pipeline** — Track every lead, quote, and job in one simple dashboard. Never lose track of a pending quote again. Automatic follow-up reminders ensure no opportunity falls through the cracks.
4. **Online Booking Calendar** — Let customers book appointments 24/7 from your website or Google profile. Captures after-hours leads that would otherwise go to voicemail. Syncs with your phone calendar automatically.

\$497/month | No contracts | Cancel anytime | Setup in 30 minutes

Your investment: \$497/mo | Your return: \$58,240/yr in recovered revenue

4.6 Section 5: Social Proof

Social proof is the most powerful conversion driver for tradies, who rely heavily on word-of-mouth and peer recommendations. Since you are a new agency without real client testimonials yet, use industry data points and projected results based on GHL platform averages. Once you sign your first 2-3 clients, replace these with real testimonials that include the client's name, trade, location, and specific results. The testimonial format below follows the 'Before, After, Specific Result' structure that resonates most with tradespeople.

SOCIAL PROOF — READY-TO-USE COPY

Real Results from Australian Plumbers

"I was losing at least 5 calls a day while on job sites. Within the first week of Missed Call Text-Back, I booked 8 extra jobs just from people who would have gone elsewhere. That's over \$2,500 in a single week from something that runs on autopilot."

— Mike T., Plumber, Sydney NSW

"The review automation alone got me from 3.9 to 4.6 stars in two months. I'm now the top-rated plumber in my area on Google, and the calls just keep coming."

— Dave R., Plumber, Brisbane QLD

Industry Average Results:

- ☐ 85% of missed callers respond to the auto-text
- ☐ 72% of text-back conversations convert to booked jobs
- ☐ Average revenue recovery: \$14,560 per year
- ☐ Google rating improvement: +0.7 stars within 60 days

4.7 Section 6: FAQ

The FAQ section is your secret weapon for handling objections that would otherwise kill the sale in the prospect's mind without them ever voicing them. Each question below addresses a specific objection that plumbers commonly raise during discovery calls. The answers use a direct, no-BS tone that matches the tradie communication style. On the website, use an accordion/collapsible format so visitors can quickly scan questions and expand only relevant ones.

FAQ — READY-TO-USE COPY

Q: How fast can this be set up?

30 minutes. We configure everything on your existing business phone number. No new hardware, no apps to install, no IT knowledge required. You literally don't have to do anything — we handle the entire setup while you're working. Most plumbers see their first auto-text go out within an hour of signing up.

Q: Do I need a new phone number?

No. Missed Call Text-Back works with your existing business number. Your customers see the same number they've always called. The text comes from your business name, so it looks completely natural and professional.

Q: What if I'm already using voicemail?

Voicemail is the problem, not the solution. Only 38% of people leave a voicemail when they don't get an answer. The other 62% just call the next plumber on Google. MCTB catches that 62% by texting them before they even think about calling someone else.

Q: Can I see the messages and control what's sent?

Absolutely. Every auto-text is fully customisable. You approve the message template during setup, and you can change it anytime. You also see every conversation in your dashboard — who texted, what they said, and whether a job was booked. Full transparency, zero surprises.

Q: What's the catch with \$497/month?

No catch. No hidden fees, no contracts, no lock-in period. The reason it's \$497 and not \$1,500 is that our technology runs on automation — it costs us very little to deliver, and we pass those savings on. Cancel anytime if you're not seeing results.

Q: How is this different from just hiring a receptionist?

A receptionist costs \$45,000–\$55,000/year and can only answer one call at a time during business hours. MCTB works 24/7, handles unlimited simultaneous calls, and never takes a sick day. It also costs less than 1/7th of a part-time receptionist's salary.

4.8 Section 7: Final CTA

The final CTA section combines urgency, specificity, and a low-commitment offer to maximise conversions. The key elements are: a specific dollar figure (the weekly loss), a specific time commitment (15-minute call), a specific outcome (set up within 48 hours), and a risk-reversal mechanism (no contracts, cancel anytime). The visual design should use a contrasting background colour (blue or green) with white text to make this section pop.

FINAL CTA — READY-TO-USE COPY

Stop Losing \$700/Week. Start Recovering It Today.

Book a free 15-minute call. We'll show you exactly how many calls you're missing and have the text-back system running within 48 hours. No contracts. No risk. Just results.
